PROJECT REPORT/SERVICE ESTIMATE AND CALCULATION OF INTERNAL DEVELOPMENT WORKS FOR PROPOSED RESIDENTIAL PLOTTED COLONY UNDER DEEN DAYAL JAN AWAS YOJNA SCHEME-2016 OVER AN AREA MEASURING 55.72396 ACRES(AFTER MIGRATION FROM LICENCE NO.6 OF 2010 DATED 14.01.2010) IN THE REVENUE ESTATE OF VILLAGE KABRI & TARAF INSAAR IN SECTOR-37, PANIPAT (HR.)

Report

Panipat town of Haryana State is situated in approx 90 Kms from Delhi. Being in the national capital Region, the town has fast developing tendency and potential. Further, it has also started sharing the growing Industrial load of Delhi. In order to relieve the growing pressure of population in National Capital of Delhi, Haryana Urban Development Authority has already developed many residential sectors. Further to the increasing demand HUDA has planned to develop new sectors in panipat. This report and estimate is for approximately 55.72396 Acres, Sector - 37, Panipat, proposed to be developed by M/s UTTIRNA INFRAPROJECTS PRIVATE LIMITED

1. WATER SUPPLY

DOMESTIC WATER SUPPLY

At present the source of water supply in this area is by tubewells till the HSVP supply is available water supply connection as the underground water is potable and fit for human use. The water supply system has been designed as per the Hazen William formula. The under ground tank will be filled from the tube well riser and after treatment, the water will be pumped directly to each plot. Entire domestic to the proposed development is to be supplied by the tube well and therefore, it is proposed to install 5 nos. of tube wells. The rate of water supply per head/day has been taken as 100 liters per head per day @ (65 % of total demand 155 liters per head per day).

FLUSHING WATER SUPPLY

Requirement of flushing water will met out from STP recycled water supply. The water supply system has been designed as per the Hazen William formula. The rate of water supply per head/day has been taken as 55 liters per head per day @ (35 % of total demand 155 liters per head per day).

DESIGN

The scheme has been designed for population considering 18 person for each plot. The rate of water supply per head/day has been taken as 155 liters per head per day.

2. SEWERAGE SCHEME

Sewer lines have been designed for three times average D.W.F in relation to water supply demand. It has been assumed that about 80% of the domestic & flushing water supply shall find its way into the proposed sewer. Sewer lines shall be laid to a gradient maintaining minimum 2.46 ft./sec self-cleaning velocity. Sewer lines up to 400mm internal dia have been designed to run half full and above 400mm internal dia have been designed to run three fourth full at peak flow. Necessary provision for laying S.W./R.C.C./PVC pipe sewer lines, construction of required number of manholes etc., has been made in the estimate.

Sewer line from proposed area will be connected to the proposed sewage treatment plant(STP). Surplus treated effluent shall be used in green belts, parking etc. The sewerage system has been marked on the respective plans.

Necessary design statement for entire sewerage system has been prepared and attached with estimate. Manning's formula has been used on the design of sewerage system.

3. STORM WATER DRAINAGE

We are proposing to lay underground R.C.C. pipe drains with required number of catch basins, manholes and rainwater recharge pits with over flow to the Proposed HSVP storm drainage system at a later stage. The intensity of rain fall has been taken as 1/4" per hour. R.C.C storm water lines have been designed as per Manning's formula.

SPECIFICATIONS

The work will be carried out in accordance with the standard specifications as laid down by the Haryana Govt/HSVP.

ROADS

Estimate of Road work is prepared as per revised specifications adopted by Haryana Shahari Vikas Pradhikaran.

STREET LIGHTING

Lump Sum Provision for streets lightings has been made in this estimate .

HORTICULTURE

Provisions for plantation, landscaping, signage, etc., have been included

DECLARATION

We will make our own arrangement for water supply, sewerage, drainage till the external infrastructure be available by Haryana Shehari Vikas Pradhikaran, at later stage.

RATES

The estimate has been prepared based on the present market rates

COST

The total cost of the scheme, including cost of all services works out to **Rs. 58,56,40,625.49**
 Including 3% Contingencies and 49% Departmental Charges

Area of DDIAY development as per License **55.724 Acre**

Net Cost Per Acre **Rs. 105.10 Lacs**
~~Rs. 97,03,058.23~~

SUB:- Approval of service plan estimate for providing water supply, sewerage, storm water drainage, Roads, Street Lighting and Horticulture works etc. in respect of 55.72396 acres DDJAY plotted colony at Village Kabri & Taraf Insaar, Sector-37, Panipat being developed by M/s Green field colonizer Pvt. Ltd. and others in collaboration with Uttirna Infra Projects Pvt. Ltd.

Technical note and comments:-

1. All detailed working drawings would have to be prepared by the colonizer for Integrating the internal services proposals with the master proposals of town.
2. The correctness of the levels will be the sole, responsibility of the colonizer for the integration of internal proposals, with the master proposals, of town and will be got confirmed before execution.
3. The material to be used shall the same specifications as are being adopted by HSVP and further shall also confirm to such directions, as issued by Chief Engineer, HSVP from time to time.
4. The work shall be carried out according to Haryana PWD specification or such specifications as are being followed by HSVP. Further it shall also confirm to such other directions, as are issued by Chief Engineer, HSVP from time to time.
5. The colonizer will be fully responsible to meet the demand of water supply and allied services till such time these are made available by State Government/ HSVP. All link connections with the State Government/ HSVP system and services will be done by the colonizer. If necessary extra tube-wells shall also be installed to meet extra demand of water beyond the provision according to EDC deposited.
6. Structural design & drawings of all the structures, such as pump chamber, boosting chamber, RCC OHSR underground tanks quarters, manholes chamber, sections of RCC pipes sewer and SW pipes, sewer, ventilating shafts for sewerage and Masonry Ventilation Chamber for Chamber for storm water drainage, temporary disposal/ arrangement etc. will be as per relevant I.S codes and PWD specifications; colonizer himself will be responsible for structural stability of all structures.
7. Potability of water will be checked and confirmed and the tube-wells will be put into operation after getting chemical analysis of water tested.
8. Only C.I/D.I pipes will be used in water supply and flushing system, UPVC/HDPE pipe for irrigation purposes.
