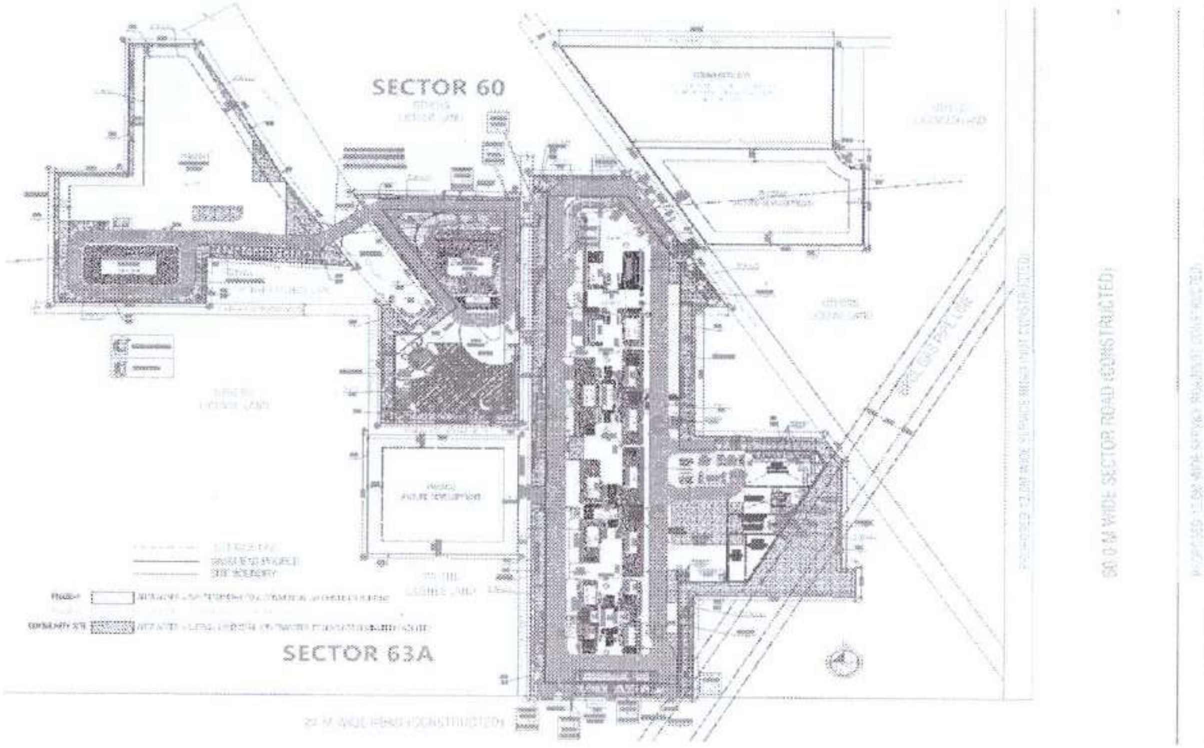
SITE PLAN



CONNECTIVITY

Sector 63A, Gurugram is an emerging premium residential destination strategically located along the Golf Course Extension Road corridor. The sector enjoys excellent connectivity to key business districts of Gurugram, including Cyber City, Golf Course Road, Sohna Road, and NH-48. Its proximity to the Rapid Metro network, major arterial roads, and Indira Gandhi International Airport ensures seamless accessibility across Gurugram and the wider NCR region.

Sector 63A predominantly comprises upscale residential developments, including luxury high-rise apartments, low-rise independent floors, and integrated townships. The locality is characterized by modern urban infrastructure, landscaped open spaces, and proximity to reputed schools, healthcare facilities, retail destinations, and commercial hubs. With its strategic location, evolving infrastructure, and views towards the Aravalli landscape, Sector 63A offers a high-quality residential environment suited to contemporary urban lifestyles.

WATER & WASTEWATER DETAILS

Water would be sourced through pipeline supply of Gurugram Metropolitan Development Authority (GMDA). The total fresh requirement for the project shall be met through municipal supply, and excess treated water shall be discharged into the GMDA sewer network.

SEWERAGE GENERATION AND TREATMENT

The treated wastewater shall be utilized for flushing and horticulture purposes, and the remaining quantity shall be discharged into the GMDA sewer network. The Sewage Treatment Plant (STP) shall be designed based on the Moving Bed Biofilm Reactor (MBBR) technology.

RAINWATER HARVESTING

The storm water disposal system for the premises shall be designed to be self-sufficient, ensuring the prevention of water collection, stagnation, or flooding. The quantity of storm water runoff depends on several factors, including the intensity and duration of precipitation, characteristics of the catchment area, and the time of concentration required for flow to reach the drains.

The drains shall be provided along the roads adjacent to the carriageway. By utilizing the road chamber, rainfall runoff from the roads shall naturally flow towards the drains. Stormwater from various buildings shall be conveyed to the adjacent drains through pipes connected via catch basins.

Based on the runoff calculations, 11 nos. rainwater harvesting pits have been proposed at selected locations to capture the maximum runoff from the site.

CONCLUSION

The proposed project has been designed in sustainable way to have least impact on environment. The project will have overall positive impact in terms of job opportunities during construction phase and organized commercial and infrastructure development during operation phase. It will also enhance the overall aesthetics of the area.
