ESTIMATE FOR PROVIDING "AFFORDABLE RESIDENTIALPLOTTED COLONY" MEASURING 14.00 ACRES AT VILLAGE KAILASH, SECTOR 28 & 28A, KARNAL BEING DEVELOPED BY M/S ALPHA CORP DEVELOPED PRIVATE LIMITED.

1 INTRODUCTION

Karnal is an important town of Haryana state. it has been decided by the Haryana Govt. to establish various sectors in Karnal. Keeping in view, the above facts a group housing has been planned in sector-28& 28A Karnal the affordable Residential plotted colony is proposed at village Baldi on planned area measuring 14.00 acres and achieved density i.e total population net planned area is 246PPA against permissible density 240 to 400 PPA. The net planned area is 13.3185 acres. The bench mark assumed as 100.0 at community site

2 WATER SUPPLY

At present the source of water supply in this area is tubewell as the under ground water is potable provision of 2 Nos. tubewell has been made with in the boundary limits of this Group Housing. However tubewells proposed in the surrounding plotted development colony would also act as stand by water source. It has been proposed to construct 1 no. underground tank of capacity 300 KL for domestic purposes. The underground tanks will be filled up form the proposed tubewell and the water will be pumped into the tanks proposed on the terrace of each building.

3 DESIGN

The scheme has been designed for approximately 3281 persons considering 13.50 persons for each apartment. The rate of water supply has been taken as 155.25 liters per capita per day (lpcd) Besides the above, necessary provisions for water requirement for community buildings, commercial complex, Grassy Lawns and Road side plantations, Road washing etc have also been taken into consideration.

4. PUMPING EQUIPMENT

It has been proposed to install a pumping station next to underground tank. At pumping station, there would be two pumping systems each comprising two pumps, one working and one standby. The provision for Diesel Generating set as a stand by source of power in case of any electricity failure has also been made. Provision is also made for chlorination of water before distribution.

5. SEWERAGE SCHEME

The sewerage network of the affordable plotted Housing colony shall be connected to the proposed 450 KLD capacity sewage Treatment plant (STP). The treated effluent will be used for landscape irrigation, surplus effluent will be discharged into the fields.

The sewerage system has been designed for 3times of average DWF. It has been assumed that 75% of domestic water supply shall find its way into the proposed sewer. All the sewer upto 200 mm dia have been designed to run half-full Necessary design statement for the entire sewerage system has been prepared and attached. Sewer lines have been designed for a minimum self cleansing velocity of 0.60 M/sec S.W. pipes will be used for sewer lines. All the manholes and related appurtenances shall be constructed as per standard design.

6. STORM WATER DRAINAGE

The design rainfall intensity has been considered as 1/4" per hour for the proposed development. The average co-efficient of run-off has been considered as 0.5 for the proposed development. Pipe drains formed of minimum 400 mm dia R.C.C NP3 pipe has been proposed for the storm water drainage. Road Gully chambers will collect the storm water form the surface and discharge into the manholes through 300 mm dia. R.C.C NP3 pipes. The internal storm water drains shall be connected to the proposed rain water harvesting well for recharging the under ground water of the surrounding plotted development, which ultimately gets connected to peripheral departmental storm water drainage system of sector road. The velocity of water in the pipe has been considered as minimum of 0.60 M/sec all the pipes are considered as running full Necessary design statement for the entire storm water drainage system has been prepared and attached.

7. ROAD AND FOOTPATHS

The construction of roads of size 9.0M wide with 3.66 M mettalled width as per std. design adopted IRC:42-2018 guide lines for the design of flexible pavements etc.

SPECIFICATIONS 8.

The work will be carried out in accordance with the standard specification of Public Health Engg, Department as laid down by Haryana Govt. /HUDA

9. RATE

The estimate has been based on the present market rates with escalation.

10

The total cost of the scheme, including cost of all services works out of Rs. 660.65 Lacs including 3% contingencies and 49% Departmental charges. price escalation, unforses

11 **DEVELOPMENT COST**

14.00 The development cost per acre having net planned area is. 13.3185 acres works out to Rs. 49.60 Lacs 75.76 /05 74043

Annexure

SUB:-

Approval of service plan estimates of affordable residential plotted colony (Under Deen Dayal Jan Awas Yojna-2016) over an area measuring 14.00 acres falling under license No. 23 of 2018 dated 18.4.2018 being developed by Alpha Corp. development Pvt. Ltd. in the revenue estate of Village Kailash Sec-28 & 28A Karnal, Distt. Karnal.

Technical note and comments:-

All detailed working drawings would have to be prepared by the colonizer 1. for Integrating the internal services proposals with the master proposals of town.

The correctness of the levels will be the sole, responsibility of the colonizer for 2. the integration of internal proposals, with the master proposals, of town and will be got confirmed before execution.

The material to be used shall the same specifications as are being adopted by 3. HSVP and further shall also confirm to such directions, as issued by Chief Engineer, HSVP from time to time.

The work shall be carried out according to Haryana PWD specification or such 4. specifications as are being followed by HSVP. Further it shall also confirm to such other directions, as are issued by Chief Engineer, HSVP from time to time.

The colonizer will be fully responsible to meet the demand of water supply and 5. allied services till such time these are made available by State Government/ HSVP. All link connections with the State Government/ HSVP system and services will be done by the colonizer. If necessary extra tube-wells shall also be installed to meet extra demand of water beyond the provision according to EDC deposited.

Structural design & drawings of all the structures, such as pump chamber, 6. boosting chamber, RCC OHSR underground tanks quarters, manholes chamber, sections of RCC pipes sewer and SW pipes, sewer, ventilating shafts for sewerage and Masonry Ventilation Chamber for Chamber for storm water drainage, temporary disposal/ arrangement etc. will be as per relevant I.S codes and PWD specifications; colonizer himself will be responsible for structural stability of all structures.

C.E. No:

Dated:

7. Potability of water will be checked and confirmed and the tube-wells will be put into operation after getting chemical analysis of water tested.

- 8. Only C.I/D.I pipes will be used in water supply and flushing system, UPVC/HDPE pipe for irrigation purposes.
- A minimum 100 i/d C.I/D.I, 200mm i/d SW and 400mm id RCC NP-3 pipes will be used for water supply, sewerage and storm water drainage respectively.
- 10. Standard X-section for S.W. pipes sewer, RCC pipes sewer etc. will be followed as are being adopted in Haryana Public Health Engineering Deptt. or HSVP.
- 11. The X-section, width of roads, will be followed as approved by the Chief Town Planner, Haryana, Chandigarh. The kerbs and channels will also be provided as per approved X-section and specifications.
- 12. The specifications for various roads will be followed as per IRC/MORTH specifications.
- 13. The wiring system of street lighting and specifications of street lighting fixture will be as per relevant standards.
- 14. This shall confirm to such other conditions as are incorporated in the approved estimate and the letter of approval.

For

Executive Engineer (HQ), Chief Engineer-II, HSVP, Panchkula.

DESIGN CALCULATION FOR RAIN WATER HARVESTING

Total Area 1958.423+1495+300+179.300+283.50=4216.22 Sqm

Area of Each Harvesting cum rechargeing well = 4546 sqm

Total quantity of rain fall $4546 \times 0/025 = 105.50$ cum or 105500 ltrs

Less 50% seepage or waste

52750 Ltrs

bal 52750 Ltrs

or 11619 Gallons

Rate of filteration

50 gallon / sft/day

area of rain water harvesting cum recharging well

11619 / 50 = 235 sft or 21.58 sqm

say 22 sqm.

Hence it proposed to construct 1 No. rainwater harvesting cum recharging well of size 8.00 x 3.00 mtr.

ANALAYSIS OF RAIN WATER HARVESTING PIT SIZE (8m X 3m)
