Memo No.LC-1635-B-JE (VA)/2013 30253 Dated: 6/2/13

Subject: **Approval of service Plan/Estim for the GROUP HOUSING COLONY measuring 48.82 acres falling in revenue estate of village Wazirpur, Sector 92, Gurgaon (license no. 44 of 2009 dated 14.08.2009 & No. 68 of 2011 dated 21.07.2011).**

The Service Plan/Estimates of Residential Group Housing Colony for the land measuring 48.82 acres falling in the revenue estate of village Wazirpur, Sector 92, Gurgaon being developed by you, has been checked and corrected wherever necessary by Chief Administrator, HUDA, Panchkula and are hereby approved subject to the following terms & conditions:

- i. You will have to pay the proportionate cost of External Development Charges for the services like water supply, sewerage, storm water drainage, roads, bridges, community buildings, street lighting, horticulture etc. on gross acreage basis as and when approved by the Director. These charges are modifiable as and when approved by the Government and modified charges will be binding upon the colonizer.
- ii. You are liable to maintain the estate developed by you as per HUDA norms till such time the colony is taken over by the Local Authority/State Govt.
- iii. The wiring system of the street lighting will be under ground and the specifications of the street lighting fixture etc. will be as per relevant standard of HVPNL.
- iv. That appropriate provision for fire fighting as required in the NBC/ISI code should also be provided by you and a fire safety certificate will be obtained by you from the competent authority before undertaking any construction. You will be sole responsible for fire safety arrangements. You will not make connection with the master services without prior approval of the competent authority.
- v. You will be fully responsible to make the arrangement of disposal of sewerage and storm water drainage till such time these are made available by HUDA and all link connections with the external system will be done by you at your own cost. You will have to ensure that sewer/storm water drainage to be laid by you will be connected by gravity with the master services laid/to be laid by HUDA/State Govt. in this area as per your scheme. In case pumping is required the same will be done by you at their own cost.
- vi. The correctness of the levels of the colony will be sole responsibility of the colonizer for integrating the internal sewer/storm water drainage of the colony by gravity with the master services.

- vii. It is made clear that roof top rain harvesting system shall be provided by you as per norms and the same shall be kept operational/maintained all the time. The arrangement for segregation of first rain shall be made by you.
- viii. The estimate do not include the provision of electrification of the colony, therefore the supervision charges and O & M charges shall be paid by the you directly to the HVPN.
- ix. You will be responsible for the construction of various structures such as RCC under ground tank etc. according to the standard specifications, good quality and its workmanship. The structural stability responsibility will entirely rest upon you.
- x. In case some additional structures are required to be constructed and decided by the Director/HUDA at a later stage, the same will be binding upon you.
- xi. You will not make the connection with the master services i.e. water supply, sewerage, storm water drainage without getting its approval from the competent authority.
- xii. Levels/extent of the services to be provided by the HUDA i.e. water supply, sewerage will be proportionate of EDC as and when made available by HUDA till that you will make its own arrangement.
- xiii. You will comply with the conditions as specified in Annexure 'A' attached with service plan/estimates.
- xiv. A copy of the approved service plan/estimates is enclosed herewith. You are requested to supply four additional copies of the approved service plan/estimates to the Chief Engineer, HUDA, Panchkula under intimation to this office.

Estimate for providing water supply, sewerage, SW drainage, roads Street light & Horticulture and maintenance for group housing Colony in Sector 92, Gurgaon.

Report

Gurgaon Town of Haryana state situated on Delhi-Jaipur National Highway No. 8 at a distance of 30 Km from Delhi. Gurgaon town falls in the National Capital Region. The town has fast developing tendency and potential. In order to relieve the growing pressure of population in the national capital of Delhi, it has been decided by the Haryana Govt. to establish various residential sectors along with infrastructure facilities in Gurgaon. It is proposed to develop a residential colony in an area of 48.82 Acres in Green Park Sector 92, Gurgaon. This colony is being developed by M/s SA Infracon Pvt. Ltd and others.

Water supply

The water supply source in this area is underground i.e. tube wells. As the underground water is portable and fit for human consumption. Therefore, required no. of tube wells has been calculated and provision taken in this estimate. An underground water storage tank will be constructed to store the water, this tank will be filled up through the proposed tube wells. the water supply system has been designed as per Hazen William formula. The necessary distribution system has been designed and design statement has been attached with the estimate.

The schème has been designed for a population of ¹⁵⁸⁹⁹~~14929~~ persons considering 5 persons for general category flat and 2 persons for EWS flat. The rate of water supply per head per day has been taken as 172.50 Ltrs.

Sewage scheme

The sewer lines have been designed for three times average DWF. It has been assumed that 80% of the domestic water supply shall find its way into the proposed sewer. Sewer lines shall be laid to a gradient maintaining minimum 0.75 m/second self cleaning velocity. The size of sewer line from 200 mm to 400 mm dia has been designed to run half full. S. W. pipe sewers shall be laid in the ground and C.I pipes shall laid under cutting basement area, necessary provision of manholes where required has been made. The sewerage system of the colony has been proposed to be connected with the STP to be constructed within the colony. It has been decided that the treated water from the STP shall be utilized for lawn irrigation and flushing system within the colony. Design statement of entire sewerage system has been prepared and attached with the estimate. Manning formula has been used to design of sewerage system.

Storm water drainage scheme

The storm water drainage scheme is proposed with underground pipe drains in ground area and CI pipe to proposed under ceiling of basement area. RCC pipes drains with required no of manholes with the roads gullies for collection and disposed of storm water have been proposed. The intensity of rain fall has been kept as $\frac{1}{4}$ " (6mm) per hour. A minimum size of 400 mm RCC pipe drain will be provided to connect manhole to manhole and designed with manning formula. Rain water harvesting system has been proposed to dispose of rain water in the ground to maintain the spring level.

Roads

It is proposed to construct 24m, 16m and 6 m wide roads in the colony as per the plan approved by the DTCP. The roads shall be constructed as per M. O. S. t. specifications.

Street lighting

The provision has been made in this estimate on lump sum basis. The lighting system will be laid as per standard specifications of HVPN.

Horticulture

The necessary provision of plantation of trees with tree guards has been taken on both sides for all roads. The green parks shall be developed by providing lawn as per HUDA required norms.

Specifications

This work will be carried out in accordance with the standard specifications of public Health as laid down by the Haryana Government/HUDA.

Cost

The total cost of the estimate including cost of all services works out to Rs. ~~2538~~ ^{3078.50} lacs including 3% contingencies and 49% department charges (i.e. price escalation, unforeseen charges, and misc. charges)

The per acre cost works out to Rs. ~~52.00~~ ^{63.06} lacs

Design calculations of W/s System for Group Housing Colony in Sector 92, Gurgaon
(Development by M/s SA Infraacon Pvt. Ltd. and others)

Domestic water requirement

a) For residential Area: As per sanctioned layout plan

Nos of flat for EWS = 670 flats

670 flat @ 2 person per flat = 1340

Nos. of flats dwelling units

For building A =	180
For building B =	180
For building C =	80
For building D =	160
For building E =	144
For building F =	80
For Tower T ₁ =	144
For Tower T ₂ =	84
For Tower T ₃ =	114
For Tower T ₄ =	144
For Tower T ₅ =	741
For Tower T ₆ =	342
For Tower T ₇ =	276
For Tower T ₈ =	28
	2613

2613 flats @ 5 person per flat =

13065

- No of flats for maintenance 262

262 flat @ 2 person/flats =

524

14929 person

Water requirement

14929 person @ 172.50 liter person

2575253

B. For Non residential area

High School 1 No.	75000.00
Primary School 2 No. @ 30000 Ltrs/day	60000.00
Nursery school 3 No @ 10000 Ltrs/day	30000.00
Creche = 1 No (Lump Sum)	2500.00
Religious Building = 1 No. (Lump Sum)	10000.00
Community centre = 2 (Lump Sum)	20000.00
Shopping area = 2 Nos @ 30000	60000.00
Ltrs. Per acre	

5058 Sq.m
 $\text{or } 1.25 \text{ Acs}$
 Dispensary = 1 No. @ (Lump Sum) 50000.00
 307500.00
 62500
 Total requirement = 2887753.00 470000 Ltr
 Say = 2882753.00
 Or 2882.75 KL

For irrigation and Lawn. = 125000

Water requirement for Zone - 1
 Total $2742577.50 + 470000 + 125000 = 3337577 \text{ Ltr}$ or 3337 KLD .
 • Dwelling unit = 1621 @ 5 person/unit = 8105
 • Flat for maintenance = 162 no. @ 2 person flat = 324
~~sema Personal~~
 8429 person @ 172.50 flat/person
 1454003

Water of non residential area

• Creache	=	2500	2500	10000 LTRs.
• Community Centre	=	10000	10000	50000 LTRs
• High School	=	75000	75000	150000 LTRs
• Nursing school	=	30000	30000	✓
• Shopping	=	30000	30000	6250 Ltr
		147500	1601503	246250

Total = $1454003 + 246250 = 1700253$ or 1702 KLD .

Water for domestic use = $1601503 \times 65/100 = 1040977$ Say 1043000
 Water for flushing use = $1601503 \times 35/100 = 560526$ Say 560500
 Say 560500 Litrs

For irrigation of lawn = $\frac{62500}{1762753} \text{ Ltr}$ 1763 KL

Dom. 1763 KL @ 65% = 1146 KLD
 Flushing 1763 KL @ 35% = 617 KLD.

Fire fighting demand

$$\begin{aligned} \text{Population} &= 8429 \\ &= 100 \sqrt{P} = 100 \sqrt{8429} & 96767 \\ &= 100 \times 2.903 \times 1000 \\ \text{1/3rd of fire fighting demand} &= \cancel{290300} \times 1/3 = & 100000 \text{ 290 KLD.} \\ &= \text{Say } 10000 \text{ ltrs.} \end{aligned}$$

Tube Wells

Approximate discharge of one tube well = 4000 gallons
Or = 18000 ltrs

$$\begin{aligned} \text{Working hours of tube well} &= 16 \text{ hrs} \\ \text{Total domestic demand per day} &= \cancel{1040977} \text{ Ltrs Say } & 1146 \\ \text{No. of tube well} &= \cancel{1040977} \times 1/1800 \times 1/16 = \cancel{3.61} & 3.98 \\ & & 1146 \\ \text{Add 10\% for standby} &= \cancel{0.36} & 0.40 \\ \text{Say} &= \cancel{3.97} \text{ say 4 No} & 4.38 \end{aligned}$$

Pumping Machinery for tube – well

Head of pump

• Depth of Spring level	=	130 feet
• Average falling in spring level	=	5 feet
• Depression head	=	20 feet
• Friction losses in pipes special & pumping machinery	=	<u>20 feet</u>
		175 feet
		53.35 mtrs
		Say 60 mtrs

$$\begin{aligned} \text{BHP} &= 4000 \times 10 \times 175 \times 100/33000 \times 1/60 \times 1/60 = 5.89 \\ &= \text{Say } 7.50 \end{aligned}$$

Provide 2 Nos. Pumps driven by electricity (One pump as stand bye) provide also one No. diesel set 10 BHP for one tube well

B. Underground Water tank

- Water demand for domestic use excluding green lawns and plantation irrigation

- Capacity of storage tank for domestic considering = $\frac{1146000}{12/24} \times \frac{8}{24}$

12-8 Hrs. storage

$$= \frac{347000}{573000}$$

sqx 580KL

For Fire fighting = 100000 Ltrs

Size of under ground tanks with 3.0 m depth

For Raw water tank = $\frac{573000}{3470000} \times \frac{1}{1000} \times \frac{1}{3.00} = 191 \text{ sqm}$

= $115.67 \text{ sqm} = 10.75 \times 10.75 \times 3.0 \text{ M}$ size 14.0m x 14.0m x 3.0m

For domestic = $10.75 \times 10.75 \times 3.0 \text{ M}$
14.0m x 14.0m x 3.0m

For Fire fighting = $100000 \times \frac{1}{1000} \times \frac{1}{3.00} = 33.33 \text{ sqm}$ 10.50 x 3.20 x 3.0 M
290 KL

Zone-I

Flushing requirement demand in Zone-I = 617 KLD

Pumping Hrs. 8 Hrs.

$$= 77.125 \text{ KLDH.}$$

or 1285.42 LPM

One pump working

Say 1300 LPM

Head 72m.

$$\text{BHP of Pump} = \frac{1300 \times 72}{60 \times 75 \times 0.60} = 34.66 \text{ HP}$$

Say 35 BHP

Providing 2 Nos Pumps of 1300 LPM electric driven
(one working and other as standby)

Boosting machinery for

Raw water and domestic water requirement per day =

Pumping Hours = 8

Hourly pumping = $1146 \text{ KLD} \times 1/8 = 143.25 \text{ KLDH}$ 2387.50 LPM
 ~~$1041000 \times 1/8 = 130125 \text{ Ltrs. Or } 28662 \text{ Gallons}$~~
 Say ~~28700 Gallons~~ $\text{say } 2400 \text{ LPM}$

Head of Pumping MachineryHeight of building $(59.93 + 3 = 62.93 \text{ M})$ = 62.93 Mtrs

Friction losses in pipes, Specials & Machinery = 4 Mtrs

Suction Lift = 4 Mtrs.

 $70.93 \text{ Mtrs or } 232.65 \text{ feet}$ $\frac{2400 \times 72}{60 \times 75 \times 0.6} = 64 \text{ BHP}$

Say 235 feet

 $\text{say } 65 \text{ BHP}$ BHP = ~~$28700 \times 10 \times 235 \times 100 / 33000 \times 1/60 \times 1/60 = 56.77$~~ say 60

Providing 2 Nos. Pumps electrically driven (One as stand by arrangements) Provide one diesel engine 100 BHP

Detail of total structures and machineryFor pumps domestic use (tube wells)

2 Nos. x 4 = 8 Nos. (Electrically driven) 7.50 BHP each

1 Nos. x 4 = 4 Nos. Diesel Set (10 BHP each)

For Boosting station

2 Nos. 60 BHP Driven by electricity for domestic and raw water

1 No. diesel oil engine for domestic

1 No. diesel oil engine for raw water

For fire fighting

2 Nos (2280 LPM discharge driven by electricity)

2 No. (2280 LPM discharge driven by diesel oil engine)

Jockey Pump = 1 No.

UGWT = ~~347000~~ 573000 $14.0 \text{ m} \times 14.0 \text{ m} \times 3.0 \text{ m}$
 Capacity (Size ~~$10.75 \text{ m} \times 10.75 \text{ m} \times 3.0 \text{ m}$~~)

Fire Fight Tank = 100000 Ltrs. Capacity (Size $10.00 \text{ m} \times 3.50 \text{ m} \times 3.0 \text{ m}$)

Tube wells = 4 Nos

Pump Chamber = 4 Nos 9Size $5.0 \text{ M} \times 4.25$

Zone - II

Water for Flushing Use = 550 KLD.

Working Hrs 8 Hrs = 68.75 KLD

Head 72 mtr

or 1145.83 LPM say 1150 LPM

$$\text{BHP} = \frac{1150 \times 72}{60 \times 75 \times 0.60} = 30.66 \text{ BHP}$$

say 30 BHP.

It is proposed to provide 2 Nos pumping set of 1150 LPM discharge at 72 m Head (one pump is working and other as standby) for Flushing purposes.

Water requirement for Zone - 2

- Dwelling Unit = 992 @ 5 person/unit = 4960 Person
 - Flat for ~~maintenance~~ ^{Semi Personal} = 100 @ 2 person/flat = 200 Person
 - Flat for EWS = 670 @ 4 person/flat = 1340 Person
- ~~6500~~ 7470 Person
 462

7470

6500 person @ 172.50 Ltres /person =

~~1121250 Ltres~~
 1288575

Water requirement for non residential area

- Primary school 2 Nos. = 60000 100 KL
 - Religious Building = 10000 5 KL
 - Community Centre = 10000 50 KL
 - Shopping = 30000 6.25 KL
 - Dispensary = 50000 62.50 KL
- ~~160000~~ 223.75 KL

= 160000 Ltres
~~1281250~~ Ltres

Total = 1288575 + 223750 = 1510325 mtr
 Hort. Provision 6250

- Water for domestic use = ~~1281250~~ x 65/100 = 832813 Ltres
 1575 Say 833000 Ltres
 1023750 or 1025 KL
- Water for flushing use = ~~1281250~~ x 35/100 = 448437 Ltres
 1575 550 KL

Fire Fight demand

Population = 7470
 = 6500 person
 = 100 P = 100 86.50
 = 100 x 2.55 x 1000 = 255000
 2.73

Considering 1/3rd for fire fighting demand

273000
 = 255000 x 1/3
 = 85000 Ltres
 273000

Tube Wells

Approximate discharge of tube well = 4000 Gallon R 18000 Liters

Working hours of one tube well = 16 hours

Total domestic demand per day = 865345 litres

No. of tube well = $\frac{865345}{18000 \times 16} = 2.89$ 3.55 Nos.

Add 10% for stand bye 1025 $= 0.29$ 0.36 No

$= 3.18$ No 3.91 Nos

Say

~~3~~ hours

Pumping machinery for tube well

4 Nos.

Head of pump

BHP = $4000 \times 10 \times 175 \times 100 / 33000 \times 60 \times 60$

= 5.89 Say 7.50

Provide 2 Nos pumps driven by electricity (one pump as stand bye) Provide also one no. diesel set of 10 BHP for each tube well

Under around water tank

Water demand for domestic use excluding green lawns and plantation of irrigation and Flashing = 833000 Ltr

1025000

Capacity of tank for domestic use

12 512500

Considering 8 Hours storage = $833000 \times 8/24 = 277667$

1025000

Say 280000

513000

say 520 KLD.

For Fire Fighting = $\frac{273000}{85000}$ litres

Say 275 KL

Size of under ground tanks

For raw water and domestic water tank = $\frac{1025000}{280000}$ Litres
 = $28000 \times \frac{1}{1000} \times \frac{1}{3.0} = 93.33$ sqm

Size = $\frac{19.0m \times 19.0m \times 3.0m}{10.0 \times 10.0 \times 3.0}$ M (One Raw and-
 For Fire Fighting $\frac{273000}{85000} = 85000 \times \frac{1}{1000} \times \frac{1}{3.0}$
 = 28.33 sqm ($10 \times 2.90 \times 3.0$)
 $19.0m \times 4.8m \times 3.0m$

Boosting Machinery for raw water domestic tank

Requirement for raw water = 833000 Litres 1025 KL

Requirement for domestic water = 833000 litres 1025 KL

Pumping Hours = 8

Hourly pumping = $\frac{833000}{8} \times \frac{1}{8} = 104125$ Say 104100 Litres
 $\frac{1025 KL}{22930}$ Gallons
 Say 23000 Gallons

128.12 KLH.

2135.33 LPM

Say 2150 LPM

Head of pumping Machinery

- Height of building ($68.90 + 3.0 = 71.90$ M) = 71.90 M
 - Friction loss in pipes & specialty's & Machinery = 4.0 M
 - Section Lift = 4.0 M
- Or 79.90 M
 Or 262.07 feet
 Say 262 feet

$\frac{2150 \times 72m}{60 \times 75 \times 0.60}$

= 57.33 HP

Say 60 BHP

BHP = $23000 \times 10 \times 262 \times 100 / 33000 \times 60 \times 60$
 = 50.72 Say 50

Provide 2 Nos. pumps electrically driven/under as stand bye arrangement) Provide one diesel engine of 75 BHP.

C.E. No. 12846
Dated 24/9/12
Annexure-A

SUB:- Approval of service plan /estimate of Group Housing Colony on the land measuring 48.82 acres being developed by M/S. S.A. Infracon Pvt. Ltd. (License No. 44 of 2009 dated 14.8.2009 & No. 68 of 2011 dated 21.7.2011) in Sec-92, Gurgaon.

Technical note and comments:-

1. All detailed working drawings would have to be prepared by the colonizer for integrating the internal services proposals with the master proposals of town.
2. The correctness of the levels will be the sole responsibility of the colonizer for the integration of internal proposals, with the master proposals, of town and will be got confirmed before execution.
3. The material to be used shall the same specifications as are being adopted by HUDA and further shall also confirm to such directions, as issued by Chief Engineer, HUDA from time to time.
4. The work shall be carried out according to Haryana PWD specification or such specifications as are being followed by HUDA. Further it shall also confirm to such other directions, as are issued by Chief Engineer, HUDA from time to time.
5. The colonizer will be fully responsible to meet the demand of water supply and allied services till such time these are made available by State Government/ HUDA. All link connections with the State Government/ HUDA system and services will be done by the colonizer. If necessary extra tube-wells shall also be installed to meet extra demand of water beyond the provision according to EDC deposited.
6. Structural design & drawings of all the structures, such as pump chamber, boosting chamber, RCC OHSR underground tanks quarters, manholes chamber, sections of RCC pipes sewer and SW pipes, sewer, ventilating shafts for sewerage and Masonry Ventilation Chamber for Chamber for storm water drainage, temporary disposal/ arrangement etc. will be as per relevant I.S codes and PWD specifications; colonizer himself will be responsible for structural stability of all structures.
7. Potability of water will be checked and confirmed and the tube-wells will be put into operation after getting chemical analysis of water tested.

C.E. No. 12846

(37)

Dated:- 24/9/12

8. Only C.I/D.I pipes will be used in water supply and flushing system, UPVC/HDPE pipe for irrigation purposes.
9. A minimum 100 i/d C.I/D.I, 200mm i/d SW and 400mm id RCC NP-3 pipes will be used for water supply, sewerage and storm water drainage respectively.
10. Standard X-section for S.W. pipes sewer, RCC pipes sewer etc. will be followed as are being adopted in Haryana Public Health Engineering Deptt.or HUDA.
11. The X-section, width of roads, will be followed as approved by the Chief Town Planner, Haryana, Chandigarh. The kerbs and channels will also be provided as per approved X-section and specifications.
12. The specifications for various roads will be followed as per IRC/MORTH specifications.
13. The wiring system of street lighting and specifications of street lighting fixture will be as per relevant standards.
14. This shall confirm to such other conditions as are incorporated in the approved estimate and the letter of approval.

Executive Engineer (W),
For Chief Administrator, HUDA,
Panchkula

Detail of Total structures and machinery

PUMPS

For domestic use (Tube Wells)

= 2 Nos x 3 = 6 Nos. (electricity driven)

= 1 x 3 = 3 Nos. Diesel set for domestic

For Boosting station

= 2 Nos. 50 BHP for domestic driven by electricity

= 2 Nos. 5 BHP for domestic driven by electricity for raw water

= 1 No. diesel oil engine for domestic

= 1 No. diesel oil engine for raw water

For Fire fighting

= 2 No. (2280 LPM discharge driven by electricity)

= 1 No (2280 LPM discharge driven by diesel oil engine)

= 1 No (Jockey Pump)

UGWT

= 28000 Litres capacity (Size 10x 10 x 3M)

Fire Fighting Tank

= 87000 Litres capacity (zie 10 x 2.9 x 3.0 M)

Tube Wells = 4 Nos

Pump Chamber for T. W.

= 4 Nos. (size 5.0 x 4.25 M)

C.I. pipe for Flushing & Irrigation under Ground.
