Gandhi International Airport and is located on National Highway 48, making it well connected with Delhi, Gurgaon, Rewari, Dharuhera, Jaipur, Ahmedabad and IT parks and educational institutes. There are several sightseeing spots around the area, some overlapping with Gurgaon. Sohna is 41 kilometres from Indira proximity to the burgeoning city of Gurgaon has in recent years caused its character and demographics to change dramatically. It has many factories, offices, hotels, Gurugram is a town and municipal corporation in the Gurugram district of the state of Haryana, India. It is a part of the National Capital Region (NCR) of Delhi. Its

colony and has named this part as Proposed Affordable residential plotted Colony for an area measuring 5.01875 (40 Kanal 3 Marla) Acres in the Revenue Estate of Singh son of Sishram in collaboration with M/s Gurugram Land & Finance Pvt Ltd. They have decided to develop the area in this master plan as a plotted residential Village Naurangpur, Sector-78, Tehsil Manesar, Dist-Gurugram, Haryana. The Haryana Government has prepared a master plan for development of Residential/Industrial/ Commercial urban estate Gurugram. Project is developed by Satpal

### Water Supply

#### Source

provisions of 10% stand by. Ultimately, water shall be supplied to the Project by HARYANA SHAHARI VIKAS PRADHIKARAN, GURUGRAM, HARYANA worked out and the tubewells will be bored after the permission from CGWA in tune with growth of demand. The ultimate requirement of tubewells includes average yield of tubewell with 40-45 ft strainers will be about 20,000 litre per hour. The recharging of underground water table in this belt is stated to be good supply is from HSVP municipal supply and tanker supply is sweet and fit for human consumption. However in borewell water is available at reasonable depth. The However still we shall resort to rain water harvesting system to keep up the recharging system. The number of tubewells required for the above area has been The source of water supply in this area is from HSVP how ever tubewells shall be proposed for Emergency if permission will get from CGWA. At present water

\* Designation

#### Design

The scheme has been designed for approved population of **1710 persons in 5.01875 acres**. The rate of water supply per head per day has been taken as 172.5 litres (150+15%) as per NBC 2016 / HSVP norms. in addition to above necessary provision of water for community area, coomercial area, parks etc. have been taken into account for calculating the maximum quantity of water requirement.

### 3 Pumping Equipments

electricity failure. Generator will be provided separately or added to the capacity of main generator. It has been proposed to install pumping set as described with standby of equal capacity. The provision for standby generating set has been provided in case of any

# 4 Under Ground Storage

requirement. The water from fire compartment shall overflow to the raw water compartment so that the water in the fire compartment always remain fresh. Underground storage tank provision has been made for 190KL capacity. in 4 compartments, which caters for the raw, domestic as well as for firefighting

### 5 Boosting Station

A boosting station having monoblock centrifugal pump set is planned near under ground reservior to pump water from domestic/ treated under ground water tank to

### 6 Distribution System

Minimum pipe dia for distribution is kept as 100 mm dia for domestic water supply. formula with C-140. Necessary provision for laying D.I. pipe K-7 conforming to relevent IS standards along with valves and specials has been made in the project. The minimum terminal head at any point will be more than 30.00 meters so thet it can serve the stilt and four floors stories construction envisaged in the plan. The distribution system for this development has been designed to supply @ 172.5 litre per head her day @ 2.5 times the average rate of flow on 'Hazen william'

### Rising Mains

Rising mains from HSVP water main or sector road to water works have also been designed and provision for 100 mm dia D.I. pipe line (dia as/ design) has been

VINTAL BAJAJ Architect CA/96/19791 938, Sector-14, Gurgaon

### & Sewerage

velocity i.e. self cleansing velocity Necessary provision for laying DWC HDPE SN8 pipes and manholes etc. has been made in this estimate. propoesd sewer. DWC HDPE SN8 pipe sewers have been proposed and designed to run half full. The sewers have been designed on 0.75 M per second minimum The sewer lines have been designed for 3 times average DWF in relation to the water supply demand assuming that 80% of water supply shall find its way into the This scheme is designed for sewer connecting to the proposed sewage treatment plant. The sewage system has been marked on the respsctive plans

### Size/ Shape of Manholes

manhole is proposed to be provided for depth upto 0.9m. rectangular as well as arch type manholes. However both rectangular and circular type of manholes are propsed to be provided. The brick masonary rectangular As per IS 4111:1986 "Circular type of manholes are much stronger than rectangular and arch type manholes thus these type of manholes are preferred over

portion and slanting on top portion so as to narrow down the top opening equal to internal dia of manhole cover The brick masonry/ concrete circular manholes are proposed to be provided for all depth exceeding 0.9 m upwards. Circular manholes are strsaight down in lower

Depending on the depth of manhole, brick circular manhole of dia 910, 1220, 1520, 1820 mm dia are proposed to be provided

# 9 Storm Water Drainage

with circular manhole. ensure better recarging of underground water table in the area. Underground R.C.C. pipe drain with minimum 400 mm dia are proposed to be provided in this area The storm water is designed to carry 6.25 mm rainfall per hour or 0.123 cusecs per acre as discharge. Also suitable provisions are contemplated in our scheme to

Necessary design statement for entire storm water system has been prepared and attached with estiamte

# 10 Rain Water Harvesting

water drainage system. Conventional type rain water harvesting are proposed to be provided The main emphasis on recharging the underground aquifers and safe disposal of storm water with flooding the site has been laid in designing/ planning of storm

### 11 Roads

basis of the detail design of the roads as approved by Chief Engineer HSVP, Gurugram. the roads of the colony 9m wide provide approach for construction of roads to the plots. Detailed calculation of the various item of works have been made on the The roads are proposed to be provided in the plotted development in such a way that main 9 m wide colony road connects with 24 m sector road. Internal service of

### 12 Street Lighting

one side of 9.0 m wide road. Luminaries with 65 watts LED lights are proposed to be provided for achieving the desired illumination. Street lighting system has been designed to provide ....mination of 15 to 20 lux on roads. Street light e provided on 6 m high steel tubular poles are located on

#### 3 Horticulture

Provision of road side plantation of trees with tree guards has been made for all roads. The parks shall be developed by providing lawns & ornamental trees with tree

### 14 Specifications:

The work will be carried out in accordance with the standard sprcification of P.H. Department as laid down by HSVP & Haryana Government.

#### 15 Rates

Estimate for providing services in this pocket has been prepared on the recent HSVP rates

### 16

charges and 49% departmental charges also. The total cost of development in this project including various P.H. and B & R services works out to Rs.-546.05 Lacs which includes 3% contingency and PE

drainage, roads, street lighting and plantations including plantations maintenance thereof as well as future expansion whatsoever indicated. The cost per gross acre for this phase works out to App. Rs. 408.80 Lacs/acre which covers the provision of services like water supply, sewerage, storm water
